

Executive Summary

Objective:

The analysis explores customer churn patterns using a dataset of 7,043 customers, focusing on various factors such as payment methods, contract types, tenure, and demographic attributes. The goal is to identify which factors are most strongly associated with higher churn rates to guide customer retention strategies.

Key Insights and Findings:

- **Contract Type and Churn:**

- Customers on month-to-month contracts exhibit the highest churn rate, with 42% of such customers likely to churn.
- In contrast, customers on one-year and two-year contracts have churn rates of 11% and 3%, respectively.
- **Implication:** Longer contract periods serve as a strong retention tool, as customers with extended commitments are far less likely to leave.

- **Payment Methods and Churn:**

- Customers paying via electronic checks show the highest churn rate at 45%, while those using credit cards, bank transfers, or mailed checks have significantly lower churn rates, averaging around 15-18%.
- **Implication:** The convenience, security, and trust issues related to electronic payments might be contributing factors. Encouraging customers to switch to more stable payment methods could reduce churn.

- **Churn by Tenure:**

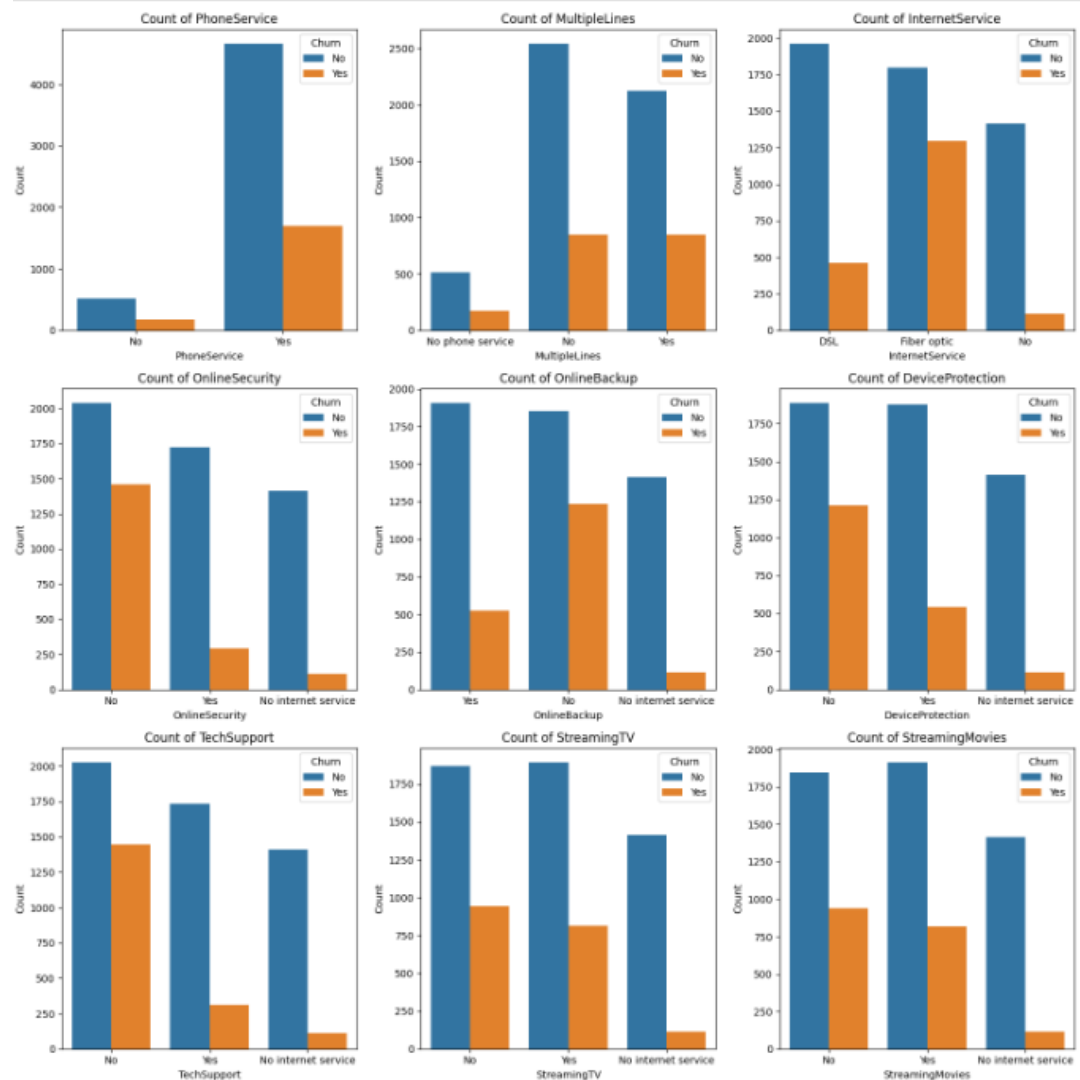

- Customers with less than one year of tenure are the most likely to churn, with a 50% churn rate. Those with 1-3 years of tenure show a decreasing churn trend at 35%, while customers who have been with the company for more than three years have a churn rate of just 15%.
- **Implication:** Engaging customers early in their journey, especially within the first year, is critical for retention.

- **Churn by Internet Service Type:**

- Customers without OnlineSecurity, TechSupport, or protection services show higher churn, highlighting their importance in retention. Fiber optic users churn more than DSL users, possibly due to pricing or service issues. Phone service and multiple lines correlate with lower churn, while non-streaming users leave slightly more, suggesting engagement benefits from entertainment bundles.

- **Implication:** This could be due to increased competition or dissatisfaction with service quality. Understanding customer satisfaction with service speed and reliability may help retain fiber optic users.

- **Senior Citizens and Churn:**

- The analysis reveals that senior citizens (aged 65+) have a churn rate of 41%, compared to a 26% churn rate among non-senior citizens.
- **Implication:** Special retention programs and targeted customer service for senior customers may help reduce churn in this demographic.

Recommendations:

- **Promote Long-Term Contracts:** Offer incentives for customers to commit to longer contracts to reduce churn.
- **Address Payment Method Concerns:** Implement campaigns encouraging customers to switch from electronic checks to more reliable payment methods.
- **Customer Engagement in Early Tenure:** Focus on improving the customer experience within the first year, as churn is highest in this period.
- **Special Senior Citizen Retention Programs:** Create personalized offers or assistance programs to retain the senior demographic.
